QA Automation Interview Task

Objective: The purpose of this task is to evaluate your ability to design and implement an automated testing solution for a given scenario using Cypress. We will assess your skills of the test automation by the following: code quality and structure, maintainable, reusable, no false positive and automation best practice.

Cypress Assignment

You are working as a test automation engineer in a software development team. For the past few weeks, the team has been hard at work, developing an e-commerce website called amazon.
Now, the website is in QA stage. The team understands that you have been learning Cypress and has therefore presented this opportunity for you to create test cases and practice your automation skills using the framework.

Cypress - Installation and setup

Install and setup Cypress:

Instructions are at the following link: cypress install

Task 1

The goal of the first task is to get familiar with the website.

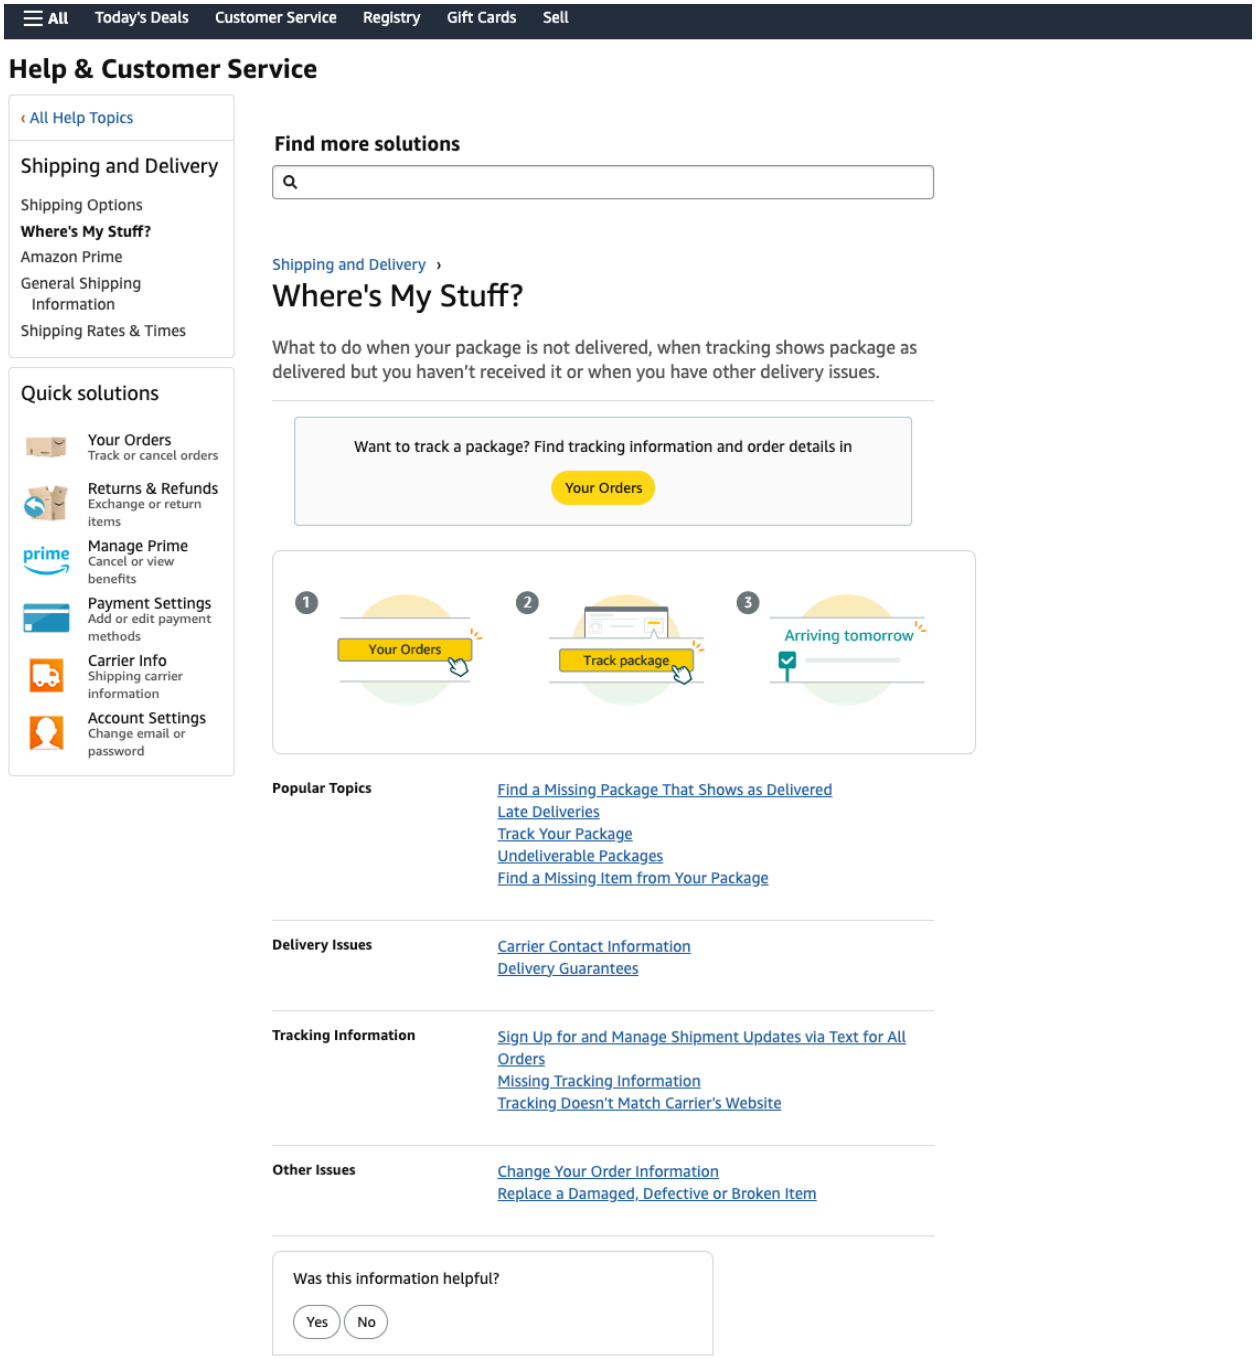

1.1 First, go to https://amazon.com and look at the website in order to get familiar with it
1.2 After you are familiar with the website, write 5 tests titles that you think is the most important
1.3 Choose one of the tests and write for it a full test case
1.4 Save it in a new file and send the task with the assignments next

Task 2

The goal of the second task is to get familiar with Cypress and to write the first automated test.

Create Cypress project and create a new test file, there we will put our first test

2.1 In Cypress, navigate to https://amazon.com.
2.2 Validate main menu (Today Deals / Customer service / Etc.)
2.3 By clicking on the tab menu, go to the “Customer service” page.
2.4 Search “where is my stuff”
2.5 Click on the first result (Where is my stuff), we should get to the following page:

Task 3

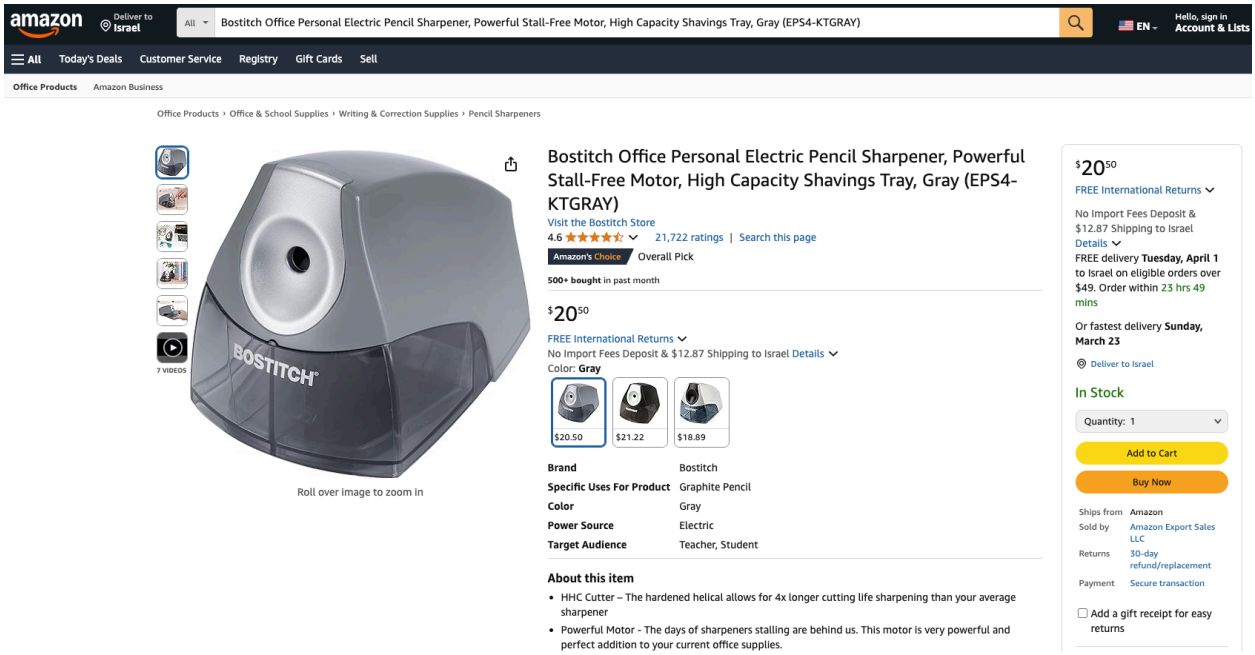

The goal of this task is to write some test cases and implement them in a new test suite. The new test suite should be setup in such a way that all tests begin with adding two items to the shopping cart and end with emptying the shopping cart. This is to ensure that all tests can run independently. One benefit here is that we could setup the tests to run in parallel, which would make the tests run faster.

TIP. Use the BeforeEach / AfterEach method.

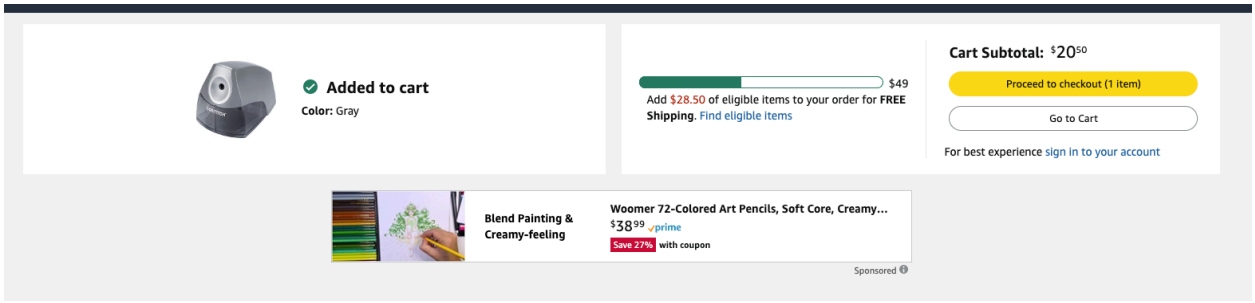

See the Cypress documentation for more information

Info: Steps 1 - 9 are the steps to run before each test in the suite.
You can use "Hong Kong" as country for shipment

1. Navigate to https://amazon.com.
2. Search for:
"Bostitch Office Personal Electric Pencil Sharpener, Powerful Stall-Free Motor, High Capacity Shavings Tray, Gray (EPS4-KTGRAY)"
3. Add the following product to the cart

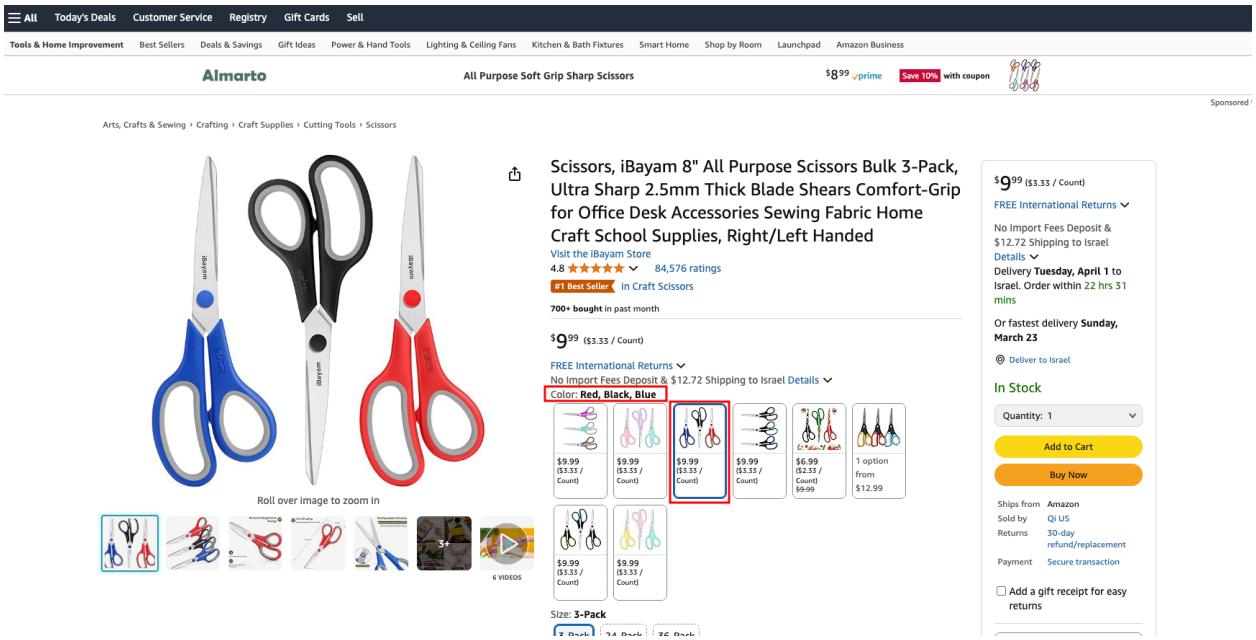

4. We should have confirmation that the product was added, and it should also appear in the side bar Cart.

5. Navigate to:

https://www.amazon.com/Scissors-iBayam-Crafting-Scrapbooking-Knitting/dp/B07H3QKN2Z

6. Image Should appear
Click on the “Red, Black, Blue” option, the “Color” text should change to “Red, Black, Blue”.

7. “Add to cart”
8. Confirmation should appear TIP: You can look for the text “Added to Cart”
9. Validate the products are in the cart

Then continue with the test.
Please note that our previous products should still appear in the cart

10. You can see that you do not qualify for free shipping. (You can use “*Hong Kong”* as the country for shipment)
11. Order 3 additional pencil sharpeners.
12. You can see that you do qualify to free shipping (More them 49$)
13. Clear the cart

Task submission:

- Upload your project to **GitHub/GitLab/Bitbucket** and provide a link
- Include a README file with setup instructions.
- Provide any necessary test data.
- Send both tasks to the email that given to you

Good luck! 🚀
